

## Welcome to RAMM!

Millions of thoughts happen in RAMM every day. Here are some ways to have some of your own. You can work on your own, in pairs or small groups. Spend as long as you like and do them in any order. Enjoy your visit.

# Think Links

## 4

Interesting wildlife facts

# Did you know?

Upstairs

- **In Fine Feather gallery (17)**  
We think birds evolved from dinosaurs – can you find the evidence to prove it?  
**Why are there more chickens in the world than any other bird?**
- **Fly on the Wall gallery (18)**  
Colour, shape and pattern are what make camouflage work.  
**What makes arctic animals, butterflies and stick insects so hard to find sometimes?**

- **Case Histories gallery (10)**  
Gerald is not a full size giraffe. **They come even taller than him...**

### ■ Finders Keepers? gallery (11)

One of the smallest specimens we have on display in the museum is the Philip de la Gardé's beetle in the left hand wall case in the bottom right hand corner.

### ■ The RSPB was founded because birds were being shot to make hats – what kind of bird was shot to make a hat?

If living creatures are hunted and killed until there are no more left – that's it, they can never come back again. Some animals became rare or extinct because humans killed them for fashion.

### ■ Finders Keepers? and Making History galleries (11 and 4)

Lots of wildlife lives in cities because tall buildings and the rubbish we leave around provides shelter and food for some birds and animals.

### ■ Can you find our black rat and brown rat? One is upstairs and one is downstairs.

### ■ Down to Earth Gallery (2)

There used to be hippos in Honiton and mammoths in Torquay – we know because their fossilised bones have been found there.

**You can find them here?**

Downstairs

### In this series:

Think Links 1

▶ Go Find Me... upstairs

Think Links 2

▶ Go Find Me... downstairs

### Think Links 3

▶ Ask an Object

▶ Desert Island

▶ Telling Tales

▶ The Wow Factor

▶ Fact or Fiction?

### Think Links 4

▶ Wildlife facts
